Increment 2

You have generated the monthly installment plan showing the month-wise payment due, total payment made, and remaining amount in your increment 1. Your increment 2 is about collecting information from loan seekers and saving it. Your chatbot shall collect the following information from the loan seekers and save them in a file namely applications.txt:

- Full Name
- Father's Name
- Postal Address
- Contact number
- Email address
- CNIC number (without dashes)
- CNIC expiry date (DD-MM-YYYY format)
- Employment status (Self-employed, salaried, retired, unemployed)
- Marital status (Single, Married, Divorced, Widowed)
- Gender
- Number of dependents
- Annual income in PKR (only numeric value without commas)
- Monthly average of electricity bill for the last 12 months (in PKR) (only numeric values without commas)
- The exact amount in PKR of the current electricity bill (only numeric values without commas)
- Information about any existing loans: If a user has taken any loans before the system shall record the following:
    - Loan period is Active or not
    - Total Loan Amount:
    - The amount returned
    - The loan amount still due
    - Bank name
    - Loan category (Car, Home, Bike)
- Details of references:
    - Name of Referee 1
    - CNIC of Referee 1
    - Issue date of CNIC of Referee 1
    - Phone number of Referee 1
    - Email address of Referee 1
    - Name of Referee 2
    - CNIC of Referee 2
    - Issue date of CNIC of Referee 2
    - Phone number of Referee 2
    - Email address of Referee 2
- Picture of applicant's CNIC Front
- Picture of applicant's CNIC Back
- Picture of applicant's recent electricity bill
- Picture of salary slip/Bank statement page 1

The images are saved in ./data/xxxx folder where xxxx is a unique 4 digit application id.

After completing this information the bot asks the user to confirm if the user wants the application to be submitted. On confirmation all this data is saved in applications.txt as a single row (could be # separated values). The order of the fields remains as given above. For example the last 4 comma separated valued shall be the paths of the image files. The system confirm the successful submission of an application. Users can ask the count of submitted, approved, and rejected applications against a CNIC. You might have to add a field or two in applications.txt. For approved applications the system generates a monthly plan with actual names of months. Ask the starting month from the user.

Increment 2 also includes a separate computer program for lender who shall be able to view list of applications and details of a particular application after selecting it. This separate interface is a conventional interface and not a chat bot. The lender shall be able to approve or reject the applications.

Notes:

- You can append the files Home.txt, Utterances.txt, Car.txt, and Scooter.txt
- Make a sprint that ends on Wednesday November 19, 2025.
- Update requirements on Jira.
- All code should be updated on GitHub.
- There will be a demo on November 20, 2025 in regular class.
- Save the information about your effort in each functionality/task. Every group shall save, in a Google sheet, hours spent by each individual on a project task. These values should be correct. The number of hours spent does not affect the grades, correctness is the key. This information shall be used to make estimations in increment 3 and later.
